

Leonardo da Vinci programme - Placement at Prothea in Milan (Italy)

Prothea

Prothea (www.protheagroup.com) is an active player in the European environmental market, with focus on:

- **Renewable energy**

Prothea is a developer, advisor and investor in renewable energy power plants with focus on solar photovoltaic, biomass, wind and mini hydro. In the past 2 years we have developed and worked on projects for more than 100MW in Italy.

- **Water**

Prothea offers environmental consultancy services to the water sector, in particular ecological quality assessment and ecosystem management. Prothea has a strong partnership with the academic and research sector which guarantees a constant update in applied ecology and bio-monitoring knowledge.

- **Education**

Prothea believes that increasing environmental awareness in young people is key for a healthier and safer planet in the future. Through our educators and technical professionals, Prothea arranges unique educational programmes for primary and secondary school students.

Prothea is based in Milan (headquarter) and London (representative office), counting on a staff of circa 15 people and a global network of partnership and collaborators.

Placement offered

Prothea is offering a 6 - 9 months placement within its renewable energy division for the development and management of solar photovoltaic and biomass plants in Italy and expansion of the business in other Central and Northern European markets. Functions will include support over technical, permitting and economic analysis for the development and investment in power plants and will include general support in the marketing activity. The candidate will also be involved in other business areas (water and education) with focus on drafting and applying for government (and other public entities) sponsored grants for environmental projects at European and global level.

Qualifications

This role calls for a graduate with scientific background, ideally an environmental or electric engineer or other relevant scientific/technical qualification, commercial and analytical in approach, committed, hard working and hands-on in style and ideally bring specific geographic knowledge of Central or Northern Europe, with language skills to match. The candidate is to be fluent in English and mother tongue in another European language. Italian is not required for this position.
